

ShipAV

Securing Your Most Valuable Asset. Wherever. Whenever.

A computer virus can spread from one host to another like human viruses. The best way to handle malicious attacks is to fight them before they do any damage. ShipAV prevents viruses from entering on the shipping company's network at the ship entry point.

In order to maintain the computers onboard are always protected, the three main things to remember are:

- 1. Operating system(OS)up-to-date*
- 2. Firewall enabled at all times*
- 3. ShipAV software installed on the ship's system and updated daily to ensure that it has the latest fixes for new viruses, worms and Trojan horses*

Its anti-virus technology provides real-time protection against virus and malicious software attacks. Specifically designed to accommodate vessel communications constraints, ShipAV benefits are the:

- *Small daily updates, 5 to 10K in size that ensure timely protection at an affordable rate*
- *Bi-directional virus content filtering from and to the ship network*
- *Inspection of content within the SMTP/POP3 protocols insuring safety before message delivery*
- *Easy installation on standalone PCs and on networked systems onboard and ashore*
- *Flexibility of working with every ship messaging software including Skyfile, Amos, GTmail and others*
- *Multilingual capability of the software*

The internet gives computer viruses an efficient path for global infection. ShipAV contemplates the global nature of the maritime industry and offers English, French, German, Italian, Japanese, Spanish, simplified and traditional Chinese versions of the maritime antivirus software of choice. Protect your pc today.
