TRANSMITTING AN EMAIL

1. Choose Transmit (Alt, T) to open the Transmit window. The highlight will be positioned on the address field.

2. Activate the Address Book by pressing Spacebar.

3. Position the highlight on the desired email destination and choose Select.

Address Book

The Address Book conveniently stores the details of all your destinations. Up to 100 destinations can be stored.

- Press F3 to access the Address Book

To add on the address book check the file AddressBook

4. Press Spacebar to get a list of Land Stations/Internet Service Providers.

Choose LES

AOR-W 002 or 012

AOR-E 102 or 112

POR 202 or 212

IOR 302 or 312

5. Position the highlight on the desired Land Earth Station / Internet Service Provider and choose Select.

6. Press the arrows to move the highlight to the '<MORE E-mail >' field.

7. In the <More E-mail> window standard additional email entries as “Cc”, “Bcc” and “Subject” can be available. Only entries supported by the selected Internet Service Provider will be present.

8. Fill in the necessary extra information using the arrow key to move between the different fields.

9. Press Enter once on '< OK >' to return to the normal transmit window

10. Press Enter once on '< SEND >' to transmit the message. The Transmit window is now removed and you are back in the Text Field. The message is saved in the message log on the disk along with addressing information allowing you to send the message again if necessary.
